

GOVERNMENT OF INDIA  
MINISTRY OF JAL SHAKTI  
DEPARTMENT OF DRINKING WATER AND SANITATION  
**RAJYA SABHA**  
**UNSTARRED QUESTION NO. 1523**  
ANSWERED ON – 09/12/2024

**FLUORIDE IN GROUNDWATER**

1523# SHRI RAMJI LAL SUMAN:

Will the Minister of JAL SHAKTI be pleased to state:

- (a) whether it is a fact that various diseases are affecting humans due to polluted water;
- (b) the details of Fluoride in groundwater in the country, State-wise and district-wise;
- (c) whether an increase has been registered in the number of patients suffering from fluorosis disease in the country due to use of Fluoride-contaminated groundwater; and
- (d) the details of funds released to states to deal with the problems of Fluoride contaminated groundwater during the last five years, State-wise?

**ANSWER**

MINISTER OF STATE FOR JAL SHAKTI  
(SHRI V. SOMANNA)

(a) Certain contaminants of drinking-water may cause adverse health effects from single exposures (e.g. pathogenic microorganisms) or long-term exposures (e.g. many chemicals). Infectious diseases caused by pathogenic bacteria, viruses, protozoa and helminths are the most common and widespread health risk associated with drinking water, while, few chemical contaminants have been shown to cause adverse health effects in humans as a consequence of prolonged exposure through drinking-water.

(b) to (d) Central Ground Water Board (CGWB), an organisation under the D/o Water Resources, River Development & Ganga Rejuvenation generates ground water quality data on a regional scale as part of its ground water quality monitoring program and various scientific studies. The State-wise details of Fluoride contamination in ground water as per information received from CGWB (based on 2022-23 data) is at **Annex-I**.

In regard to provision of safe drinking water to all rural households, including areas where fluoride contamination is present in ground water, the Government of India, in partnership with States, is implementing Jal Jeevan Mission (JJM) since August, 2019 to provide potable tap water supply in adequate quantity, of prescribed quality and on regular & long-term basis to every rural household in the country. Under the Jal Jeevan Mission, as per existing guidelines, Bureau of Indian Standards' BIS:10500 standards are adopted as benchmarks for quality of water being supplied through the piped water supply schemes.

Under JJM, while planning water supply schemes to provide tap water supply to households, priority is given to habitations affected by chemical contaminants. Under JJM, while allocating the funds to States/ UTs, 10% weightage is given to the population residing in habitations affected by chemical contaminants including fluoride. States/ UTs have been advised to plan and implement piped water supply schemes based on alternative safe water sources for the villages with water quality issues in ground water.

Under JJM, it was envisaged that planning, implementation and commissioning of piped water supply scheme based on a safe water source may take time, therefore, purely as an interim measure, States/ UTs have been advised to install community water purification plants (CWPPs) especially in Arsenic and Fluoride affected habitations to provide potable water to every household to meet their drinking and cooking requirements.

Since launch of JJM, due to the efforts taken under the mission, the number of reported Fluoride affected habitations have reduced over the years from 7,996 in August, 2019 to 255 as on 06/12/2024. Further, in all the remaining 255 Fluoride–affected habitations, provision of safe drinking water for cooking and drinking requirements has been made available through CWPPs/ IHPs.

Under JJM the funds are not released separately for eradication of Fluoride in ground and drinking water. The State/ UT-wise details of funds allocated, released, and utilized under JJM for provision of safe and potable water through taps to households including those affected by Fluoride during 2019-20, 2020-21, 2021-22, 2022-23, 2023-24 and 2024-25 are at **Annex-II**.

National Programme for Prevention and Control of Fluorosis (NPPCF), Directorate General of Health Services (DGHS), M/oHFW has also informed that during FY 2023-24, approximately 1.01 lakh individuals have been examined in the community in fluorosis endemic districts under the programme, out of which approximately 8.6% individuals have been suspected of dental fluorosis. Accordingly, for FY 2024-25, as per the reports received from the States/UT, as of 30th September, 2024, approximately 3.89 lakh individuals have been examined in the community in fluorosis endemic districts under the programme, out of which approximately 8.4% individuals have been suspected of dental fluorosis. In view of the above, it can clearly be seen that there has been no increase in the incidence of fluorosis cases across the country.
