**STATEMENT REFERRED TO IN REPLY TO PARAS (A) to (E) OF LOK SABHA  
STARRED QUESTION NO. 300 DUE FOR REPLY ON 6.12.2016 REGARDING  
“WESTERN GHATS” BY DR. KAMBHAMPATI HARIBABU:**

(a) Yes, Sir. Western Ghats is a natural geological landscape stretching across about 1500 kilometers along the west coast of six states namely, Gujarat, Maharashtra, Goa, Karnataka, Kerala and Tamil Nadu and is a global biodiversity hotspot due to its rich biological diversity.

(b) The Forest Survey of India (FSI) has reported that no specific data on the extent of forest cover and its decline in the entire Western Ghats has been documented in the India State of Forest Report (ISFR).

(c) The Indian Institute of Science (IISc) Bangalore in its study has reported changes in the land use in some selected areas of Western Ghats in the districts of Shimoga and Chikmangalur in Karnataka due to the activities such as plantation, cultivation and increased human settlements/habitation.

(d) Organisations such as the Botanical Survey of India (BSI) and the Zoological Survey of India (ZSI) have undertaken surveys of flora and fauna which indicate that complete documentation on the inventory on flora and fauna of Western Ghats is not available.

(e) The Government of India has taken several steps for the conservation of the biodiversity of Western Ghats. These include, establishment of Protected Areas (PAs) comprising 16 National Parks, 54 Wildlife Sanctuaries, 6 Conservation Reserves, 1 Community Reserves, 9 Tiger Reserves and 2 Elephant Reserves to provide stringent protection to both flora and fauna under the provisions of the Wildlife (Protection) Act, 1972. In addition, the Ministry of Environment, Forest & Climate Change (MoEF&CC) has issued a draft notification dated 04.09.2015 for notifying an area of 56,825 square kilometres as ecologically sensitive covering six states in the Western Ghats, while permitting sustainable development in the area.
