

GOVERNMENT OF INDIA
MINISTRY OF WATER RESOURCES,
RIVER DEVELOPMENT & GANGA REJUVENATION
LOK SABHA
UNSTARRED QUESTION NO. 1372
ANSWERED ON 09.02.2017

WATER SCARCITY

1372. ADV. NARENDRA KESHAV SAWAIKAR

Will the Minister of WATER RESOURCES, RIVER DEVELOPMENT AND GANGA REJUVENATION be pleased to state:

- (a) whether the Government is aware that the country is going to become water scarce in another few years, if so, the details and the facts thereof;
- (b) whether the Government proposes to conduct any study on demand supply of water in the country; and
- (c) if so, the details thereof and the steps taken to ensure that there will be no scarcity of water in the country?

ANSWER

THE MINISTER OF STATE FOR WATER RESOURCES, RIVER DEVELOPMENT AND GANGA REJUVENATION
(DR. SANJEEV KUMAR BALYAN)

(a) The average annual water availability of any region or country is largely dependent upon hydro-meteorological and geological factors and is generally constant. As per National Commission on Integrated Water Resources Development (NCIWRD) report, the total water availability of India received through precipitation is about 4000 Billion cubic meter (BCM) per annum. After evaporation, 1869 BCM water is available as natural runoff. Due to topographical and other factors, the utilizable water availability is limited to 1123 BCM per annum, comprising of 690 BCM of surface water and 433 BCM of replenishable ground water.

However, water available per person is dependent on population of the country and for India, water availability per capita is reducing progressively due to increase in population.

The average annual per capita water availability in the years 2001 and 2011 was assessed as 1820 cubic meters and 1545 cubic meters respectively which may reduce further to 1341 and 1140 in year 2025 and 2050 respectively. India is home to more than 17% of world's human population and 17.5% of world's cattle population with only 2.4% of world surface area and 4% of fresh water resources of world.

Annual per-capita water availability of less than 1700 cubic meters is considered as water stressed condition, whereas annual per- capita water availability below 1000 cubic meters is considered as a water scarcity condition. Due to high temporal and spatial variation of precipitation, the water availability of many region of the country is much below the national average and can be considered as water stressed / water scarce.

(b) & (c) No, Madam. There is no proposal at present in this Ministry to conduct a study on demand supply of water in the country.

Water being a State subject, water supply is the responsibility of the States/UTs. Central Government facilitates the States/UTs in framing broad policies, programmes, and guidelines on water supply and provides

financial/technical assistance under various programmes/schemes run from time-to-time.

A National Perspective Plan (NPP) envisaging inter-basin transfer of water has been formulated by this Ministry to improve water security in the country. The implementation of NPP would provide 35 million hectare of additional irrigation potential, 34000 mega watts (MW) hydro power generation, flood moderation, navigation, drinking and industrial water supply, fisheries, salinity and pollution control etc.

Central Ground Water Board, under this Ministry has prepared a conceptual document entitled “Master Plan for Artificial Recharge to Ground Water in India” during the year 2013 envisaging construction of 1.11 crore Rainwater Harvesting and Artificial Recharge structures in the country to harness 85 BCM (Billion Cubic Meters) of water. The augmented ground water resources will enhance the availability of water for drinking, domestic, industrial and irrigation purposes. The Master Plan has been circulated to all State Governments for implementation.

Central Government has launched the National Water Mission with the objective of conservation of water, minimizing wastage and ensuring its more equitable distribution both across and within States through integrated water resources development and management. One of the goals of National Water Mission is increasing water use efficiency by 20%.

Improved water use efficiency in different sectors such as in irrigation (through micro-irrigation, e.g., drip, sprinkler etc.), industry and households is being encouraged through various initiatives, programmes/schemes of the Government.

Water conservation and water harvesting structures to augment ground water constitute a special focus area for MGNREGA works and about 2/3rd of the expenditure is directly related to construction of such structures.

Recycle and reuse of water, after treatment to specified standards, rainwater harvesting and artificial recharge are being incentivized through various initiatives, programmes/ schemes of the Government.

Central Government has launched Pradhan Mantri Krishi Sinchai Yojana (PMKSY) with the vision of extending the coverage of irrigation ‘**Har Khet ko Pani**’ and improving water use efficiency ‘**More crop per drop**’ in a focused manner with end to end solution on source creation, distribution, management, field application and extension activities.

This Ministry has launched Jal Kranti Abhiyan (2015-16 to 2017-18) in order to consolidate water conservation and management in the country through a holistic and integrated approach involving all stakeholders, making it a mass movement.

Ministry of Urban Development has launched Atal Mission for Rejuvenation and Urban Transformation (AMRUT) with the objectives providing basic services e.g. water supply, sewerage, urban transport to households and build amenities in cities to improve the quality of life for all.
