

GOVERNMENT OF INDIA  
MINISTRY OF ENVIRONMENT, FOREST AND CLIMATE CHANGE

**LOK SABHA**  
**UN-STARRIED QUESTION NO. 2937**  
**TO BE ANSWERED ON 03.08.2018**

**Pollution Standards**

2937. DR.PRABHAS KUMAR SINGH:  
SHRI BADRUDDINAJMAL:

Will the Minister of ENVIRONMENT, FOREST AND CLIMATE CHANGE be pleased to state:

- (a) whether the Government or any of its agencies are conducting periodic test on the level of pollution in various cities of the country including Odisha;
- (b) if so, the details thereof during each of the last four years, State/UT-wise;
- (c) whether the Government has fixed pollution standard for cities in the country;
- (d) if so, the details thereof; and
- (e) the steps taken by the Government to make the cities pollution free in the country?

**ANSWER**

**MINISTER OF STATE IN THE MINISTRY OF ENVIRONMENT, FOREST AND CLIMATE CHANGE  
(DR. MAHESH SHARMA)**

(a) & (b) The ambient air quality is being monitored at 703 ambient air quality monitoring stations covering 307 cities/towns in 29 States including Odisha and 6 Union Territories under National Air Quality Monitoring Programme (NAMP). Under NAMP, three air pollutants viz., Sulphur Dioxide ( $\text{SO}_2$ ), Nitrogen Dioxide ( $\text{NO}_2$ ) and Particulate Matter size equal to or less than 10 micron ( $\text{PM}_{10}$ ) are being monitored at all the locations. Under NAMP, there are 38 air quality monitoring stations covering 14 cities in Odisha. Ambient air quality data of different cities of the country including Odisha during 2013, 2014, 2015 and 2016 with respect to  $\text{SO}_2$ ,  $\text{NO}_2$  and  $\text{PM}_{10}$  is attached at **Annexure-I**.

Nationwide water quality monitoring is carried out under National Water Quality Monitoring Programme (NWMP) at 3500 locations including surface and ground water.

Based on assessment of water quality of rivers carried out during Year 2017, 317 polluted river stretches on 293 rivers were identified with respect to indicator of organic pollution i.e. Biochemical Oxygen Demand (BOD) and Fecal Coliform Bacteria (FC) throughout the country. 659 towns were identified as polluting sources along the respective river stretches out of which 35 are metropolitan cities (**Annexure-II**).

- (c) & (d) The revised National Ambient Air Quality Standards (NAAQS) have been notified in 2009. The NAAQS is given in **Annexure III**. Primary Water Quality Criteria limits notified under E (P) Rules, 1986 is applicable for all the water bodies in the country. Primary Water Quality Criteria is given in **Annexure IV**.
- (e) The Government has taken several steps to address air pollution which inter alia, include notification of National Ambient Air Quality Standards; setting up of monitoring network for assessment of ambient air quality; introduction of cleaner / alternate fuels like gaseous fuel (CNG, LPG etc.), ethanol blending, launching of National Air Quality index; universalization of BS-IV since 2017; leapfrogging from BS-IV to BS-VI fuel standards by 1st April, 2020; notification of Construction and Demolition Waste Management Rules; banning of burning of biomass; promotion of public transport network; streamlining the issuance of Pollution Under Control Certificate; issuance of directions under Section 18(1)(b) of Air (Prevention and Control of Pollution) Act, 1981 and under Section 5 of Environment (Protection) Act, 1986; installation of on-line continuous (24x7) monitoring devices by major industries; etc.

The Government has taken several steps to address water pollution which inter alia, include notification of ‘Sewage Discharge Standards for STPs’ under the Environmental (Protection) Act, 1986; issuance of directions under Section 18(1)(b) of Water(Prevention and Control of Pollution) Act, 1974 to State Pollution Control Boards (SPCBs)/ Pollution Control Committees (PCCs) regarding treatment & utilization of sewage; issuance of directions under Section 5 of Environment (Protection) Act, 1986 regarding ‘Treatment and Utilization of Sewage for Restoration of Water Quality of River’ to Municipal Corporations of 46 Metropolitan Cities and 20 State Capitals; issuance of directions to implement ‘Zero Liquid Discharge’ for various industrial sectors for protection of water quality of rivers and streams; Common Effluent Treatment Plants (CETPs) for clusters of Small Scale Industrial units; continuous water quality monitoring system for getting real time information on the effluent quality through installation of on-line continuous (24x7) monitoring devices by major industries; etc.

**Annexure III**

**Revised National Ambient Air Quality Standards (NAAQS)**  
 [NAAQS Notification dated 18<sup>th</sup> November, 2009]

S. No.	Pollutants	Time Weighted Average	Concentration in Ambient Air		<b>Methods of Measurement</b>
			Industrial, Residential, Rural and other Areas	Ecologically Sensitive Area (notified by Central Government)	
1	Sulphur Dioxide (SO <sub>2</sub> ), µg/m <sup>3</sup>	Annual*	50	20	1. Improved West and Gaeke 2. Ultraviolet Fluorescence
		24 Hours**	80	80	
2	Nitrogen Dioxide (NO <sub>2</sub> ), µg/m <sup>3</sup>	Annual*	40	30	1. Modified Jacob&Hochheiser 2. Chemiluminescence
		24 Hours**	80	80	
3	Particulate Matter (Size <10µm) or PM <sub>10</sub> µg/m <sup>3</sup>	Annual*	60	60	1. Gravimetric 2. TEOM 3. Beta attenuation
		24 Hours**	100	100	
4	Particulate Matter (Size <2.5 µm) or PM <sub>2.5</sub> µg/m <sup>3</sup>	Annual*	40	40	1. Gravimetric 2. TEOM 3. Beta attenuation
		24 Hours **	60	60	
5	Ozone (O <sub>3</sub> ), µg/m <sup>3</sup>	8 hours**	100	100	1. UV photometric 2. Chemiluminescence 3. Chemical Method
		1 hours **	180	180	
6	Lead (Pb), µg/m <sup>3</sup>	Annual *	0.50	0.50	1. AAS/ICP Method after sampling using EPM 2000 or equivalent filter paper 2. ED-XRF using Teflon filter
		24 Hour**	1.0	1.0	
7	Carbon Monoxide (CO), mg/m <sup>3</sup>	8 Hours **	02	02	Non dispersive Infra Red (NDIR) Spectroscopy
		1 Hour**	04	04	
8	Ammonia (NH <sub>3</sub> ), µg/m <sup>3</sup>	Annual*	100	100	1. Chemiluminescence 2. Indophenol blue method
		24 Hour**	400	400	
9	Benzene (C <sub>6</sub> H <sub>6</sub> ) , µg/m <sup>3</sup>	Annual *	05	05	1. Gas chromatography based continuous analyzer 2. Adsorption and Desorption followed by GC analysis
10	Benzo(a)Pyrene (BaP)- particulate phase only, ng/m <sup>3</sup>	Annual*	01	01	Solvent extraction followed by HPLC/GC analysis
11	Arsenic (As), ng/m <sup>3</sup>	Annual*	06	06	AAS/ICP method after sampling on EPM 2000 or equivalent filter paper
12	Nickel (Ni), ng/m <sup>3</sup>	Annual*	20	20	AAS/ICP method after sampling on EPM 2000 or equivalent filter paper

\* Annual Arithmetic mean of minimum 104 measurements in a year at a particular site taken twice a week 24 hourly at uniform interval. \*\* 24 hourly 08 hourly or 01 hourly monitored values, as applicable shall be complied with 98% of the time in a year. 2% of the time, they may exceed the limits but not on two consecutive days of monitoring.

NOTE: Whenever and wherever monitoring results on two consecutive days of monitoring exceed the limits specified above for the respective category, it shall be considered adequate reason to institute regular or continuous monitoring and further investigation.

**Annexure-IV****Primary Water Quality Criteria for Bathing**

S. No.	CRITERIA	RATIONALE
1	Faecal Coliform: 500 (Desirable) MPN/100ml: 2500 (Maximum Permissible)  Faecal Streptococci: 100 (Desirable) : 500 (Maximum Permissible)	To ensure low sewage contamination. Faecal coliform and faecal streptococci are considered as they reflect the bacterial pathogenicity. The desirable and permissible limits are suggested to allow for fluctuation in environmental conditions such as seasonal changes, changes in flow conditions etc.
2	Dissolved Oxygen: 5 mg/l or more	The minimum dissolved oxygen concentration of 5 mg/l ensures reasonable freedom from oxygen consuming organic pollution immediately U/s which is necessary for preventing production of anaerobic gases (obnoxious gases) from sediments
3	Biochemical Oxygen Demand (3 day@27°C) : 3 mg/l or less	The Biochemical Oxygen Demand of 3 mg/l or less of the water ensures reasonable freedom from oxygen demanding pollutants and prevent production of obnoxious gases.
