

**GOVERNMENT OF INDIA
MINISTRY OF HEALTH AND FAMILY WELFARE
DEPARTMENT OF HEALTH AND FAMILY WELFARE**

**LOK SABHA
UNSTARRED QUESTION NO. 2412
TO BE ANSWERED ON 11TH MARCH, 2016**

CERVICAL CANCER

2412. SHRI OM PRAKASH YADAV:

Will the Minister of **HEALTH AND FAMILY WELFARE** be pleased to state:

- (a) whether cervical cancer is the largest killer of women in India among all cancers;
- (b) if so, the details thereof;
- (c) whether the Government proposes to undertake research on cancer in coordination with the World Health Organisation (WHO);
- (d) if so, the details thereof; and
- (e) the preventive measures taken/being taken by the Government to check spreading of cervical cancer in the country?

**ANSWER
THE MINISTER OF HEALTH AND FAMILY WELFARE
(SHRI JAGAT PRAKASH NADDA)**

(a) to (e): As per data collected by National Centre for Diseases Informatics and Research - National Cancer Registry Programme of ICMR, the estimated number of deaths due to cervical cancers accounts for 24% of all anatomical sites of cancer in women in India. This is the largest proportion among all cancers in women in India. The estimated number of deaths due to cervical cancers for the year 2015 is 62416.

In the Government sector, Research activities for detection and treatment of cancer are mostly carried out by Institutions/Departments such as the Indian Council of Medical Research, Department of Science and Technology and Department of Atomic Energy. The Bhabha Atomic Research Centre has developed Bhabhatron and the Society for Applied Microwave Electronics Engineering and Research (SAMEER) has developed Linear Accelerator (LINAC).

The Indian Council of Medical Research is promoting cancer research including epidemiological, clinical, basic and translational research. The ICMR has also developed protocols for the management (including treatment) of Buccal Mucosa Cancer, Gall Bladder Cancer, Stomach Cancer, Colorectal Cancer, and Tongue Cancer. Institute of Cytology and Preventive Oncology under the Indian Council of Medical Research has developed a hand held device called Magnivisualizer with inbuilt source of light that can be used in field conditions for early detection of cervical cancer and oral cancer lesions.

Central Government supplements the efforts of the State Government for improving healthcare including prevention, diagnosis and treatment of Cancer. At present, National Programme for Prevention and Control of Cancer, Diabetes, Cardiovascular Diseases and Stroke (NPCDCS) being implemented under National Health Mission (NHM) for interventions upto the district level includes awareness generation for Cancer prevention, screening, early detection and referral to an appropriate level institution for treatment. The focus is on three areas namely breast, cervical and oral Cancer. Screening guidelines have been provided to State Governments for implementation. Suspected cases are to be referred for confirmatory diagnosis by various tests including histo-pathological biopsy.

Government of India is also implementing a scheme for enhancing the tertiary care facilities for Cancer in the country. Under the said scheme, Government of India is assisting to set up/establish 20 State Cancer Institutes (SCI) and 50 Tertiary Care Cancer Centres (TCCC) in different parts of the country. The maximum assistance inclusive of State share for SCI is upto Rs. 120 crores and for TCCC is upto Rs. 45 crores.
